Features

Designed Bell

Reversed Mouthpipe

Optional Trims

- The nature of small bore and designed bell offer less resistance, creating a concentrated and powerful sound.
- The design of the reversed mouthpipe and the elliptic tuning slide crook permits easy playing in higher registers without extra effort.
- Each JTR-1600I trumpet provides ideal feel with optional trims that players can change it by their taste. It includes all metal concave and pearl inlaid finger buttons, light and regular valve springs, metal and Delrin valve guides, standard and heavy weight bottom caps.

*"I am extremely pleased to announce my new trumpet:
The Jupiter Professional XO-1600I.*

*I was involved with the design, research, and
development of JTR-1600I. After testing the
first factory runs, I have to take my hat off to the
technicians. These horns are consistent and fabulous.
It's without a doubt the best trumpet I've ever played".*
