YTR8340EM

Features

Developed in conjunction with
Eric Miyashiro

Xeno

Custom Xeno "Eric Miyashiro" B^b trumpet with thinner bell with French bead and side seam.

The French bead bell rim material allows for enhanced feedback to the player. The thinner bell with wider diameter creates a quicker response and powerful sound. Side seam production enables the instrument to have more open vibration.

Top and bottom piston caps and piston stems are made of brass. All three finger hooks are O-shaped rings for better stability, tonal quality and free blowing. The lightweight, hollow 3 slide stopper screw is designed to allow for free blowing.

The large bore size, unique to the YTR8340EM, enables smooth air flow and allows consistent sound throughout the range of the instrument.

The unique shape of the main tuning slide brace allows for a more free-blowing feel and helps the player achieve the point where the horn resonates most freely.

The new backpack style semi-soft case has been designed specifically for the YTR8340EM. The double case can hold a flugelhorn along with the trumpet.

Eric Miyashiro

Miyashiro made his debut as a professional musician at age 14 as the lead trumpet player of the Sammy Davis Jr band.

After graduating from Berklee College of Music he toured with the most prestigious names in the business including Woody Herman, Frank Sinatra, Mel Torme and Tony Bennett.

Currently a resident of Japan, Miyashiro works as a top studio musician, clinician and leader of his own band, the EM Big Band.
