

# YTR9636

Heavyweight E<sup>b</sup>/D Trumpet

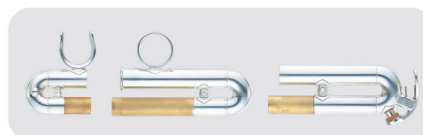

Yellow Brass Bell

With slides for E<sup>b</sup> or D

Finish	Silver-plated
Weight	Heavy
Bore Size	ML: 11.65mm (0.459")
Bell Diameter	123 mm (4-7/8")
Bell Material	Yellow Brass
Mouthpiece	TR14B4
Included Accessories	Main tuning, 1st and 3rd slides for E <sup>b</sup> and D

YTR9636

## Features

Developed in conjunction with  
John Hagstrom, Chicago Symphony Orchestra

B<sup>b</sup>/D trumpet with new style curved leadpipe and a more thin bell with French bead and side seam.

- Fixed bell (no bell tuning system)
- MC1 leadpipe (same venturi size)
- Two-piece valve casing (top - nickel/silver, lower - brass)
- Extra main tuning slide and 1st & 3rd for D Caps and button as Chicago model

The YTR9636 shares many of the attributes of the groundbreaking Yamaha Artist Model Series B<sup>b</sup> and C trumpets, including a French bead bell rim with low dome wire that improves sound projection due to the sharper rim edge.

The new horn features a number of specialized design features, including a unique 'S' shape leadpipe configuration, which uses the MC1 leadpipe taper to produce exceptional intonation and response characteristics.

### Hand-lapped pistons and slides

Hand-lapping pistons and slides ensures an absolutely perfect fit and seal between the piston and casing or slide parts. Such a perfect fit helps to achieve smooth air flow and smooth action and improve the response and intonation of the instrument.

### Pressure-formed tubing

Perfectly rounded tubing results in less turbulence and a smoother air flow, thus allowing for an excellent scale and reduced resistance.

### Hand-hammered one-piece bell

A one-piece bell has a side seam, making it a continuous extension of the instrument's material. This results in pure, uniform resonance and superior tone. A hammered yellow brass bell produces a perfectly-balanced tone with quick response and extra presence due to advanced manufacturing.
